ITEP 309 – Networking 2

Reymart Joseph P. Pielago

DECEMBER 26, 2023

INTRODUCTION

Mr. Rufus Shinra became the new CEO of Shinra Electric Power Company after his father's death in the city of Midgar; the company is going thru transition and will whitewash their old offices into a new one. The company's main job is to give the residents of Midgar a Mako (Nuclear) powered electricity. The company has 3 office rooms located in 3 different building around the city, with 1 functioning as the Main Headquarters. He hired you as a Network Engineer to create a plan to renew his 3 offices. These are the things he discussed with you during the meeting:

- 1) He already has available computer units from each of the offices and tells you to utilize them.
- 2) The company has at least 15 computer units per Office that were used for work related functions such as frontline services, billing, call center for online inquiries and technical support team.
- 3) You need to reorganize all computer networks in the 3 offices around the city and wanted to have a consolidated data in the main headquarters.
- 4) The company should have a stable internet connection at all times because they have online transactions with the client.
- 5) Budget is not an issue since they own the electricity in the whole Country.

NETWORK TOPOLOGY

An extensively used network architecture that is well-known for its scalability and costeffectiveness is the extended star topology. It is an excellent option for Shinra Electric Power Company because it is especially beneficial for large-scale networks. In this topology, each office in the city of Midgar is represented by a number of peripheral nodes that are connected to a central hub, which is usually housed in the main headquarters.

We keep to what customers actually need since they want better internet speed. We constructed a DNS and HTTP servers so that employees could easily reach their website, shinraepcompany.com. In order for the router to get data from the internet provider's server and from them much faster, we also utilized fiber. Instead of using router-to-router connections, we used router-to-switch connections to increase security. This stops computers from transmitting data to and from other office buildings.

We placed security cameras throughout the office to increase security. We installed smoke detectors in the server room and kitchen to ensure the security of the workplaces. The server room has a smart air conditioner and smart door of its own.

The network design is reasonably priced. Apart from the primary goal of obtaining a faster internet connection, we only made additions to the things that the workplace actually requires.

BUDGET PLAN

DEVICE	QUANTITY	UNIT PRICE	TOTAL PRICE
STOCK COMPUTER	15	0	0
NEW COMPUTER	1	₱ 63,995	₱ 63,995
CCTV	18	₱ 12,400	₱ 223,200
LAPTOP	3	₱ 15,675	₱ 47,025
ALARM SIREN	4	₱ 3,877	₱ 15,508
SMOKE DETECTOR	4	₱ 450	₱ 1,800
DOOR	1	₱ 3,000	₱ 3,000
AIR CONDITION	1	₱ 10,999	₱ 10,999
CROSS-OVER CABLE (15 ft.)	6	₱ 2,450	₱ 14,700
STRAIGHT THROUGH CABLE (15 ft.)	45	₱ 4,977	₱ 223,965
SERIAL DTE CABLE (10 ft.)	5	₱ 1,327	₱ 6,635
DNS SERVER	1	₱ 166,500	₱ 166,500
HTTP SERVER	1	₱ 303,508	₱ 303,508
ROUTER	3	₱ 2,240	₱ 6,720
ACCESS POINT	6	₱ 1,790	₱ 10,740
GATEWAY	3	₱ 817	₱ 2,451
SWITCH-TT	9	₱ 2,215	₱ 19,935
SWITCH-PT	1	₱ 7,898	₱ 7,898
			OVER-ALL TOTAL: ₱ 1,128,579
